Adopted by the 12th Meeting of the Conference of the Parties at Punta del Este, Uruguay, 1-9 June 2015, through Resolution XII.2

The 4th Strategic Plan 2016 – 2024

The Convention on Wetlands of International Importance especially as Waterfowl Habitat – the “Ramsar Convention”

The Mission of the Ramsar Convention

Conservation and wise use of all wetlands through local and national actions and international cooperation, as a contribution towards achieving sustainable development throughout the world.

To achieve this Mission it is essential that vital ecosystem functions and the ecosystem services they provide to people and nature are fully recognized, maintained, restored and wisely used.
Rationale

A Vision for the 4th Strategic Plan

“Wetlands are conserved, wisely used, restored and their benefits are recognized and valued by all”

Background

1. This is the 4th Strategic Plan of the Ramsar Convention, the first of which was prepared in 1997. The work of the Convention has since 1997 been organized around three pillars: i) the wise use of all wetlands through national plans, policies and legislation, management actions and public education; ii) the designation and sustainable management of suitable wetlands for inclusion on the list of Wetlands of International Importance; and iii) international cooperation on transboundary wetlands and shared species.

2. The wise use of wetlands is the key concept orienting the work of the Ramsar Convention. “Wise use of wetlands” is defined as “the maintenance of their ecological character, achieved through the implementation of ecosystem approaches, within the context of sustainable development”. Wise use therefore has at its heart the conservation and sustainable use of wetlands and their resources, for the benefit of people and nature.

3. In the context of implementation of wetland activities under the Convention on Biological Diversity the Ramsar Convention is recognized as the lead and both conventions are striving to strengthen the cooperation and explore possibilities of synergy. In 2014 the Conference of Parties to the Convention on Biological Diversity invited the Ramsar Convention to provide elements of advice concerning the funding that may be referred to the Global Environmental Facility through the Conference of Parties to the Convention on Biological Diversity.

Importance of Wetlands

4. The Ramsar Convention is the first Multilateral Environmental Agreement (MEA) at the global level, adopted in 1971. The Ramsar Sites network constitutes the largest network of officially recognized internationally important areas in the world. This network of wetlands, comprising 2,208 Ramsar Sites covering 210.7 million hectares as of 8 June 2015, constitutes the backbone of a global network of wetlands that maintain vital functions and provide ecosystem services for both people and nature. The identification and the management of these wetlands, for conservation and sustainability, is a core purpose of the Convention, essential for the realization of long-term benefits for biological diversity and people taking into account different approaches and visions.

5. Wetlands are areas of marsh, fen, peatland or water, whether natural or artificial, permanent or temporary, with water that is static or flowing, fresh, brackish or salt, including areas of marine water the depth of which at low tide does not exceed six metres.

---

1 Between 1997 and 2015, three Strategic Plans have been implemented: SP1 (1997 – 2002); SP2 (2003 – 2008); SP 3 (2009 – 2015)
2 CBD Decision XII/30
3 see http://www.ramsar.org/
6. Wetlands deliver a wide range of ecosystem services such as biodiversity, water supply, water purification, climate regulation, flood regulation, coastal protection, useful fibres, spiritual and cultural inspiration and tourism.

7. Wetlands play a key role in economic activity linked to transportation, food production, water risk management, pollution control, fishing and hunting, leisure and the provision of ecological infrastructure.

8. Most of the water we collect and use comes from wetlands\(^4\). However, water is unevenly distributed and today, over 700 million people live without access to safe drinking water. In addition 2.5 billion people lack sanitation impacting further on wetlands\(^5\).

9. Wetlands are too often equated with wastelands and there is little awareness of the vital services that wetlands bring.

**Trends in Wetlands**

10. At a global level, the Millennium Ecosystem Assessment\(^6\) found that inland and coastal wetland ecosystems were (in 2005) being lost at a rate faster than that of any other ecosystem, and the trend towards loss of wetlands resources has not been reversed since. The primary indirect drivers of this degradation and loss are identified as population growth and change in economic activity; the primary direct drivers of degradation and loss are identified as infrastructure development, land conversion, water use, eutrophication and pollution, overharvesting, overexploitation of wetland resources, climate change and invasive alien species.

11. A recent study\(^7\) of long-term and recent trends in global wetland area, based on a review of 189 reports of change in wetland areas finds that the reported long-term loss of natural wetlands averages between 54% and 57% but that loss may have been as high as 87% since 1700 AD. There has been a much (3.7 times) faster rate of wetland loss during the 20th and early 21st centuries, with a loss of 64% to 71% of wetlands since 1900. Conversion of coastal natural wetlands has accelerated more than that of inland natural wetlands in the 20th century and that conversion and loss is continuing in all parts of the world, and particularly rapidly in Asia.

12. In the report *Changes in the Global value of Ecosystem Services*\(^8\), the costs of loss of freshwater wetlands worldwide from 1997 to 2011 has been valued at US$2.7 trillion per year, the costs of loss of tidal marshes / mangroves has been estimated at US$7.2 trillion per year and the loss of coral reefs has been estimated at US$11.9 trillion.

13. The report *The Economics of Ecosystems and Biodiversity for Water and Wetlands*\(^9\) notes that values of inland and coastal ecosystems services are typically higher than for other ecosystem types, that the “nexus” between water, food and energy is one of the most fundamental

---

\(^4\) Progress on Drinking Water and Sanitation, UNICEF, WHO, 2012  
\(^8\) R. Costanza et al., Changes in the Global value of ecosystem services, Global Environmental Change 26 (2014) 152 - 158  
relationships – and increasing challenges – for societies, that wetlands provide ecological infrastructure that can help to reach a range of policy objectives, that wetland loss can lead to significant loss of human well-being and have negative economic impacts on communities, countries and businesses, and that wetlands-related and water-related ecosystem services need to become an integral part of water management in order to make the transition to a resource-efficient, sustainable economy.

14. The Convention on Biological Diversity’s *Global Biodiversity Outlook* 4
trends also indicates that the trend of wetland loss and degradation is worsening. In contrast to natural wetlands, however, it notes that the area of human-made wetlands tends to be increasing, but the quality of these may be lower than that of the ones destroyed. Despite the partly good progress, additional action is required to achieve global Aichi Biodiversity Targets for 2020. For achieving the 2050 vision of an end to biodiversity loss in conjunction with key human development goals for climate change, combating desertification and land degradation, requires changes in society including much more efficient use of land, water, energy and materials, rethinking our consumption habits and in particular addressing trends in food production.

**Global Context**

15. **Report of the Open Working Group on Sustainable Development Goals.** It is anticipated that all wetlands and the Ramsar Sites network will have a direct relevance for any Sustainable Development Goals which are related to water quality and supply, food and water security, adaptation to climate change, energy supply, healthy living, biodiversity and sustainable use of ecosystems, sustainable human settlements, poverty eradication, innovation and the development of appropriate infrastructure.

16. The Ramsar Sites network, and the effective management of Ramsar Sites and more widely the wise use of rest of the world’s wetlands is an essential contribution to the work of not only the Convention on Biological Diversity but also the other Multilateral Environmental Agreements such as the Convention on Migratory Species, the UN Framework Convention on Climate Change and the UN Convention to Combat Desertification, and the water-related Conventions.

**Review** of Progress in the Implementation of the Third Strategic Plan

17. A review of progress with implementation of the 3rd Strategic Plan was made on the basis of National Reports to COP11 and responses by Contracting Parties and Ramsar partners to a questionnaire on the Strategic Plan in 2014.

18. The main conclusion of the review of implementation of the 3rd Strategic Plan was that at an overall, global level, the implementation of the 3rd Strategic Plan can be characterized as a work in progress. It is noted that a number of core aspects of the Convention, such as the wise use of wetlands identification of potential Ramsar Sites, inventories, preparation of management plans, monitoring of Site status and ecological character, and reporting under the Convention continue to require regular attention and action.

19. The other main finding is that there is an increasing sense of urgency amongst Contracting Parties in the face of accelerating degradation and loss of wetlands and that responding to this

---

11 A review of the implementation of the 3rd Strategic Plan has been completed and is available at http://www.ramsar.org/cda/en/ramsar-documents-strategicplansc47/main/ramsar/1-31-605_4000_0__
requires enhanced engagement with drivers of loss and degradation in order to prevent, stop and reverse degradation through a mainstreaming of wetland values in public and private investments and management of wetlands.

**Priority Areas of Focus**\(^\text{12}\) for the Convention in the Next Nine Years

20. This summary of priority focus areas of the Ramsar Contracting Parties for the implementation of the Convention in the 2016 – 2024 period is drawn from National Reports to COP11, from the questionnaire on the 4th Strategic Plan completed by many Contracting Parties and partners in 2014, and from feedback received during the Pre-COP regional consultations in Africa, the Americas, Asia, and Europe in October and November 2014.

21. **Preventing, stopping and reversing the loss and degradation of wetlands:** The largest changes in loss of wetlands continue to be from unsustainable agriculture, forestry and extractive industries, especially oil, gas and mining, the impacts of population growth (including migration and urbanization) and changes in land use that override environmental considerations. Addressing and engaging the drivers behind these pressures on wetlands is a condition for limiting, adapting to, and mitigating their impacts. Realization of this fact and its consideration in planning and decision-making requires that wetland resources and wetland ecosystem benefits are measured, valued and understood widely within societies.

22. **Science-based advice and guidance:** Enhancing the generation and delivery of science based advice and guidance to practitioners and policy makers through the STRP and CEPA processes.

23. **Climate change and wetlands:** The critical importance of wetlands for climate change mitigation and adaptation is understood.

24. **Information about ecosystem functions and the ecosystem services they provide to people and nature:** The services, benefits, values, functions, goods and products that wetlands provide have not yet been integrated in national development plans. The lack of recognition of the role of wetlands to be able to exercise fully the human right to water and poverty reduction, is an important factor in its reduction as well as in the modesty of the efforts invested in restoring wetlands. The integral values and benefits, both material or non-material for people and nature, in a non-consumptive approach include spiritual, existential and future-oriented values.

25. **Communicating ecosystem functions and the ecosystem services they provide to people and nature:** Mainstreaming wetland values and enhancing the visibility of the Convention through reaching out with effective communications to decision makers and the wider public. This should contribute to an enhanced understanding of the contribution of wetland values to people’s livelihoods and health, economic development and biodiversity, soil and water.

26. **Enhancing cooperation:** Coordinating / participating in cooperation platforms\(^\text{13}\) (site level, city, river, lake and groundwater basins, national, regional and global levels), to promote mainstreaming of wetland values within water, soil and biodiversity management and public and private investments bringing together site and other managers, key private and public stakeholders.

---

\(^{12}\) Particular challenges and conditions are described for each region in the COP 11 Regional Overviews and in the responses to the Questionnaires to Contracting Parties and partners (see http://www.ramsar.org/cda/en/ramsar-documents-strategicplansc47/main/ramsar/1-31-605_4000_0__

\(^{13}\) National Wetland Committees; biodiversity, water, regional bodies
27. **Implementing the Convention**: Improving compliance with Ramsar provisions concerning Ramsar Site updates, inventories of all wetlands and Wetlands of International Importance, maintenance of ecological character and management of sites, improving the ecological character where not good enough, especially on the Montreux Record, the preparation of management planning processes for all Ramsar Sites, and implementation of such management planning on the ground through the presence of staff, appropriate infrastructure and other resources.

28. **Identifying and designating wetlands as Ramsar Sites and transboundary Ramsar Sites**, based on national inventories to ensure their protection for the future and the inclusion of under-represented wetland types in the Ramsar Site network.

29. **Wise use of wetlands**: Wetlands that are providing local, basin-level, national, regional and global benefits, are well and actively managed to ensure that the ecological functions are maintained.

30. **Invasive alien species**: Acting to limit and eradicate invasive species in wetlands.

31. **Strengthen and support the full and effective participation** and the collective actions of stakeholders, including indigenous peoples and local communities, for the existence of sustainable, comprehensive and wise use of wetlands.

32. **Synergies**: Enhancing efforts to streamline procedures and processes including reporting and to facilitate data sharing amongst parties responsible for – or cooperating in – the implementation of this and other MEAs and related agreements. Through cooperation, aim to increase the identification of synergies with collaborating MEAs and other international processes at national and global levels.

33. **Financing**: Financing is needed to manage wetlands. The cost for non-action may be severe. Adequate financing is a particular challenge in many countries, especially developing countries.

34. **Basin perspective**: Analysing and expressing wetland functions and the ecosystem services they provide to people and nature at river, lake and groundwater basin level, engaging with the stakeholders is necessary to recognize wetlands as part of a wider water cycle.

### Implementing the 4th Strategic Plan

35. The 4th Strategic Plan 2016 – 2024 calls for actions to be undertaken by the Contracting Parties, supported by the Secretariat, the Ramsar Regional Initiatives, the Scientific and Technical Review Panel (STRP) and the CEPA (Communications, Education, Participation and Awareness) network, and in collaboration with International Organization Partners (IOPs) and other international and intergovernmental organizations and MEAs.

36. Contracting Parties should implement the Strategic Plan at national and regional levels by developing national wetlands policies, strategies, action plans, projects and programmes or other appropriate ways to mobilize action and support for wetlands. This can be part of or supplement to the National Biodiversity Strategy Action Plan.

---

14 Annex 2 shows convergence between Ramsar Strategic Plan and Aichi Targets.
37. It is understood that the Contracting Parties differ substantially in their situations and in their ability to implement the Convention. Each Party is encouraged to establish its own priorities within the Strategic Plan, develop its own work plan for implementing them, and consider its own use of its own resources. This strategic plan should be implemented as a contribution to the other internationally agreed environmental goals and targets.

38. Contracting Parties are encouraged to synergize their efforts aimed at implementing the Convention with measures that they take to implement the Convention on Biological Diversity, the UN Convention on Migratory Species, the UN Framework Convention on Climate Change, the UN Convention to Combat Desertification, and other regional and global MEAs as they deem appropriate.

Enabling Conditions for Implementation

39. The successful achievement of the 4th Ramsar Strategic Plan depends on the commitment and engagement of Contracting Parties and other stakeholders. Based on views expressed by Contracting Parties during the consultative process for the preparation of this Strategic Plan, a certain number of factors that will enable and facilitate implementation have been identified. Contracting Parties and Convention partners are urged to cooperate in the implementation of these measures.

Resource Mobilization

40. International and national funding sources committed to the conservation and wise use of wetlands have been facilitated through private, public, national and international resources from all sources including the Global Environmental Facility. Despite this development, the funds available are insufficient to achieve the full suite of goals and targets expressed in this plan. Effective mobilization of additional resources for wetland conservation and wise use, and for engaging with drivers of wetland degradation and loss, is required at local, national, regional and global levels. This mobilization can be achieved through the Resource Mobilization and Partnership Framework and the efforts of Contracting Parties, Ramsar Regional Initiatives, IOPs and the Secretariat’s Partnership Unit.

Outreach and Promotion of the 4th Strategic Plan

41. The Secretariat’s activities in Communications will be enhanced, including CEPA (communications, education, participation and awareness raising), to enable the Convention to be better known and its mission more widely recognized, as well as increasing involvement of the target audience in wetlands issues. These efforts will support the CEPA Focal Points network and the outreach and promotion activities of Contracting Parties.

Partnerships

42. The wise use of wetlands and their resources will ultimately involve a range of actors well beyond those responsible for the management and maintenance of Ramsar Sites and other wetlands. This holds at local, national, regional and global levels where existing partnerships with Ramsar Regional Initiatives, IOPs and MEAs should be strengthened and new partnerships with civil society and the business sector forged in order to enhance Convention implementation and reverse the rates of loss and degradation of wetlands.

International Cooperation
43. The Ramsar Convention has put in place a series of arrangements for international cooperation in order to link Ramsar with global debates and processes related to sustainable development including water, livelihoods, biodiversity, disaster risk reduction, resilience and carbon sinks. These relationships will be consolidated over the coming period.

- The Ramsar Convention is the lead partner in the implementation of activities related to wetlands under the Convention on Biological Diversity (CBD) and has a responsibility to offer political, technical and scientific advice and guidance to the CBD and enhance cooperation between the two conventions at all levels.
- The Parties to the Ramsar Convention have granted IOP status to six leading organizations (Birdlife International, International Union for the Conservation of Nature (IUCN), International Water Management Institute (IWMI), Wetlands International, Wildfowl & Wetlands Trust (WWT) and World Wide Fund for Nature (WWF)) which are actively contributing in all the regions and on a regular basis to the further development of policies and tools of the Convention and their application at the national and local levels, particularly by assisting Contracting Parties to deliver conservation and wise use on the ground and meet their obligations under the Convention.
- The Ramsar Convention participates in the Biodiversity Liaison Group (BLG) bringing together the heads of the Secretariats of seven biodiversity-related conventions (the Convention on Biological Diversity (CBD); the Convention on Trade in Endangered Species of Wild Fauna and Flora (CITES); the Convention on Conservation of Migratory Species and Wild Animals (CMS); the Ramsar Convention on Wetlands; the Convention Concerning the Protection of the World Cultural and Natural Heritage (WHC); the International Treaty on Plant Genetic Resources for Food and Agriculture (ITPGRFA); and the International Plant Protection Convention (IPPC)
- Memorandums of understanding and cooperation have been signed15 with 48 partners.

Regional and Bilateral Cooperation

44. Regional and bilateral cooperation should be strengthened to enhance the conservation and wise use of wetlands and water resources. The Ramsar Regional Initiatives are effective mechanisms to promote and support regional and bilateral cooperation, capacity-building, technology and knowledge exchanges, wetland related information, communications and mobilization of financial resources for activities on the ground.

45. Further cooperation between Contracting Parties can be strengthened through the designation and joint management of Transboundary Ramsar Sites at river, lake and groundwater basin level, with the possible support, upon request, of the Ramsar Secretariat, Ramsar Regional Initiatives and IOPs as well as other Contracting Parties and international organizations.

Capacity Building

46. Contracting Parties, Ramsar Regional Initiatives, IOPs and other partners need to address capacity-building needs of Contracting Parties and other stakeholders in a range of fields, including inventory, wetland management, wetland status monitoring and assessment, communications and promotion of wetlands and wetland values, scientific and technical knowledge and guidance, and knowledge and technology exchange.

15 The full list of the 48 memorandums of understanding / cooperation signed by the Convention can be found at http://archive.ramsar.org/cda/en/ramsar-documents-mous/main/ramsar/1-31-115_4000_0__
47. The use of additional languages by the Convention may constitute an important means for extending its reach and visibility in regions of the world where understanding of the work and value of the Convention is currently not well known.

**Goals and Targets 2016 – 2024**

The Goals of the 4th Strategic Plan have been formulated in recognition of the fact that a new approach is needed in order to change the negative direction of the trends described above.

These Goals constitute the four priority areas for the Ramsar Convention for the 2016 – 2024 period. They include three Strategic Goals and one Operational Goal which supports them.

The Table in Annex 1 presents more details about the goals, including the tools, lead actors, indicators, and baselines for the Goals and Targets outlined below.

**Strategic Goals**

**Goal 1: Addressing the Drivers of Wetland Loss And Degradation**

The multiple human impacts on wetlands are growing. Influencing the drivers of wetland degradation and loss and the integration of the role of wetland values (monetary and non-monetary) into planning and decision-making requires the development of a methodology that enables wetland resources and ecosystem benefits to be assessed so that the multiple environmental functions and benefits are understood widely within societies. Contracting Parties, the Secretariat, Regional Initiatives and IOPs will enhance their engagement with relevant stakeholders in order to diminish threats, influence trends, restore wetlands and communicate good practices.

**Target 1:** Wetland benefits are featured in national/local policy strategies and plans relating to key sectors such as water, energy, mining, agriculture, tourism, urban development, infrastructure, industry, forestry, aquaculture, fisheries at the national and local level.

**Target 2:** Water use respects wetland ecosystem needs for them to fulfil their functions and provide services at the appropriate scale *inter alia* at the basin level or along a coastal zone.

**Target 3:** The public and private sectors have increased their efforts to apply guidelines and good practices for the wise use of water and wetlands.

**Target 4:** Invasive alien species and pathways of introduction and expansion are identified and prioritized, priority invasive alien species are controlled or eradicated, and management responses are prepared and implemented to prevent their introduction and establishment.

**Goal 2: Effectively Conserving and Managing the Ramsar Site Network**

Ramsar Sites constitute the largest network of officially recognized internationally important wetland areas in the world. This network constitutes the backbone of a larger network of wetlands.
Parties must commit themselves to efforts to protect and effectively manage the existing Ramsar Sites and enable the full and effective participation of stakeholders, including indigenous peoples and local communities, as well as to expanding the reach of the Convention by continuously working to add more sites and areas of wetlands recognized under the Convention.

Target 5: The ecological character of Ramsar sites is maintained or restored, through effective planning and integrated management.

Target 6: There is a significant increase in area, numbers and ecological connectivity in the Ramsar Site network, in particular under-represented types of wetlands including in under-represented ecoregions and Transboundary Sites.

Target 7: Sites that are at risk of change of ecological character have threats addressed.

Goal 3: Wisely Using All Wetlands

The wise use of all wetlands requires that Parties ensure they are addressing wetlands beyond those currently included in the Ramsar Site network. This work may occur at the national, subnational, regional, and transboundary levels, including at basin level. Mainstreaming recognition of ecosystem functions, services and benefits into a wide range of sectors and with a broad array of actors will help ensure the success of this effort.

Target 8: National wetland inventories have been initiated, completed or updated and disseminated and used for promoting the conservation and effective management of all wetlands.

Target 9: The wise use of wetlands is strengthened through integrated resource management at the appropriate scale, *inter alia*, within a river basin or along a coastal zone.

Target 10: The traditional knowledge, innovations and practices of indigenous peoples and local communities relevant for the wise use of wetlands and their customary use of wetland resources are documented, respected, subject to national legislation and relevant international obligations, and fully integrated and reflected in the implementation of the Convention, with a full and effective participation of indigenous peoples and local communities at all relevant levels.

Target 11: Wetland functions, services and benefits are widely demonstrated, documented and disseminated.

Target 12: Restoration is in progress in degraded wetlands, with priority to wetlands that are relevant for biodiversity conservation, disaster risk reduction, livelihoods and/or climate change mitigation and adaptation.

Target 13: Enhanced sustainability of key sectors such as water, energy, mining, agriculture, tourism, urban development, infrastructure, industry, forestry, aquaculture and fisheries, when they affect wetlands, contributing to biodiversity conservation and human livelihoods.

**Operational Goal**

**Goal 4:** Enhancing Implementation
It will be vital for the survival of wetlands and the success of the Convention for Parties to enhance implementation of the Strategic Plan. Various approaches will help strengthen the implementation of the three Strategic Goals, and ultimately of the Convention itself. They involve critical actions to be undertaken by Contracting Parties themselves, and in partnership with other Parties and other entities, in particular with regard to scientific and technical advice and guidance, resource mobilization, public awareness, visibility and capacity building. The Ramsar Secretariat will also play a vital role in raising awareness and visibility of the Convention, as well as mobilizing resources to support enhanced implementation.

Target 14: Scientific guidance and technical methodologies at global and regional levels are developed on relevant topics and are available to policy makers and practitioners in an appropriate format and language.

Target 15: Ramsar Regional Initiatives with the active involvement and support of the Parties in each region are reinforced and developed into effective tools to assist in the full implementation of the Convention.

Target 16: Wetlands conservation and wise use are mainstreamed through communication, capacity development, education, participation and awareness.

Target 17: Financial and other resources for effectively implementing the 4th Ramsar Strategic Plan 2016 – 2024 from all sources are made available.

Target 18: International cooperation is strengthened at all levels.

Target 19: Capacity building for implementation of the Convention and the 4th Ramsar Strategic Plan 2016 – 2024 is enhanced.

Monitoring and Evaluation

1. The Table showing Goals, targets, tools, indicators and baseline in Annex 1 can be used as a basis for organizing the implementation of the Strategic Plan at national and other levels. Specific indicators are identified for each of the targets identified. These indicators will be monitored by Contracting Parties as appropriate.

2. The Standing Committee will keep the implementation of the Strategic Plan under review, based on regular reports from the Secretariat and the STRP, and based on National Reports prepared for each reporting cycle.

3. A review of the 4th Ramsar Strategic Plan at COP14 will be done and the modalities and scope for this review will be established at COP13, taking into account _inter alia_ the outcomes of the discussions of the Post-2015 Sustainable Development agenda and Sustainable Development Goals, the work of IPBES and coordination needs with regards to the review of the Strategic Plan for Biodiversity 2011-2020.

4. **Global Indicators**: A small, regionally representative expert group meeting back-to-back with the meeting of the CBD’s Ad Hoc Technical Expert Group on Indicators in Switzerland in July 2015, including interested Contracting Parties, expert support from STRP, IOPs and other relevant MEAs and international processes will be constituted to develop options, for additional indicators for the Strategic Plan having regard in particular to:
• previous Resolutions of the Conference of the Parties related to indicators, including Resolution IX.1;
• the need for indicators to address outcomes and effectiveness and to be capable of practical implementation;
• the need to minimize cost of indicator implementation by using existing data and information flows, including through national reporting and reporting on Ramsar Sites.
## Strategic Goals

### Goal 1: Addressing the drivers of wetland loss and degradation

- Wet grasslands – [XXX Sites]
- Peatlands – [XXX Sites]
- Sea-grass beds – [XXX Sites]
- Mangroves – [XXX Sites]
- Temporary Pools – [XXX Sites]
- Bivalve (shellfish) reefs – [XXX Sites]

(Data source: Ramsar Sites database).

Sites that are at risk of change of ecological character have threats addressed.

Identification and implementation of measures to remove sites from Article 3.2 or Montreux Record.

Ramsar Advisory missions.

Contracting Parties with support from Secretariat

Baseline

At COP12, [47] Ramsar Sites (2.2%) are listed on the Montreux Record. (Report of the Secretary General pursuant to Article 8.2 COP12 Doc.7).

---

Totals relate to number of sites containing the relevant habitat site: some sites may contain more than one habitat type and so be counted under each habitat type.
| Ramsar Handbook 18: Managing wetlands  
[http://www.ramsar.org/sites/default/files/documents/pdf/lib/hbk4-18.pdf] | 21% of Parties have reported to the Ramsar Secretariat all cases of negative human-induced change or likely change in the ecological character of Ramsar sites pursuant to Article 3.2. (National Reports to COP12).  
[76] Ramsar Sites reported by Parties to the Ramsar Secretariat of negative human-induced change or likely change in the ecological character of Ramsar Sites pursuant to Article 3.2. (Data source: Report of the Secretary General pursuant to Article 8.2 COP12 Doc.7).  
16% of Parties have taken actions to address the issues for which Ramsar sites have been listed on the Montreux Record. (National Reports to COP12).  
**Indicators**

**Baselines**

By COP12, [15] Regional Initiatives are in operation under the framework of the Ramsar Convention. (Ramsar Secretariat).

68% of Parties have been involved in the development and implementation of a Regional Initiative under the framework of the Convention. (National Reports to COP12).

**Indicators**

Number of Regional Initiatives successfully implemented. (Data source: National Reports).

% of Parties that have been involved in the development and implementation of a Regional Initiative under the framework of the Convention. (Data source: National Reports).
| 16 | Wetlands conservation and wise use are mainstreamed through communication, capacity development, education, participation and awareness. | The Secretariat’s CEPA programme will deliver high profile media and public awareness placements and programs to raise the convention’s image. Ramsar Handbook 6: Wetland CEPA | Contracting Parties with support from Secretariat and IOPs | **Baselines**

**World Wetland Day**

89% of Parties have branded Word Wetlands Day activities. (National Reports to COP12).

In 2015 884 World Wetland Day activities or events reported to the Secretariat. (Data source: Ramsar Secretariat CEPA program)

In 2015, [58, 566] individual visits to the World Wetlands Day website. (Data source: worldwetlandsday.org website).

795 views of WWD message from Youtube channel (Data source Ramsar Youtube Channel https://www.youtube.com/user/RamsarConvention)

292,100 reached in Twitter (Data source https://twitter.com/RamsarConv)

**CEPA programmes**

80% of Parties with a) a governmental CEPA National Focal Point and 69% of Parties with b) a non-governmental National Focal Point. (Data source: Ramsar Secretariat Data Base and National Reports to COP12).

27% of Parties have established national action plans for wetland CEPA. (National Reports to COP12).

**Visitor centres**

By COP12, 636 centres (visitor centres, interpretation centres, education centres) have been established in Ramsar sites. |
By COP12, 309 centres established at other wetlands. (National Reports to COP12).

**Indicators**

**World Wetland Day**

- % of Parties that have branded World Wetlands Day activities. (Data source: National Reports).
- Number of World Wetland Day activities or events reported to the Secretariat. (Data source: Ramsar CEPA program).
- Number of internet references to World Wetland Day activities. (Data source: internet analysis).
- Number of internet references to the Ramsar Convention. (Data source: internet analysis).
- Number of social media links to World Wetland Day. (Data source: social media analysis).

**CEPA programmes**

- % of Parties with a) a governmental CEPA National Focal Point and b) a non-governmental National Focal Point (Data source: National Reports).
- % of Parties that have established national action plans for wetland CEPA. (Data source: National Reports).

**Visitor centres**

- Number of centres (visitor centres, interpretation centres, education centres) have been established in Ramsar Sites. (Data source: National Reports).
- Number of centres at other wetlands. (Data source: National Reports).

**Possible further indicators that may be developed**
| 17 | Financial and other resources for effectively implementing the fourth Ramsar Strategic Plan 2016 – 2024 from all sources are made available | The Secretariat’s Partnership team will raise non-core funds to fund priority convention activities. | Ramsar Secretariat, Contracting Parties, IOPs, development assistance agencies. | Baseline  
21% of Contracting Parties have provided additional financial support through voluntary contributions to non-core funded Convention activities. (National Reports to COP12).  
40% of Contracting Parties have received funding support from development assistance agencies for national wetlands conservation and management. (National Reports to COP12).  
**Indicators**  
% of Contracting Parties that have provided additional financial support through voluntary contributions to non-core funded Convention activities. (National Reports to COP12).

## Ramsar Goals and Targets 2016 - 2024

### Ramsar Strategic Goals

<table>
<thead>
<tr>
<th>Ramsar Goals and Targets 2016 - 2024</th>
<th>Aichi Biodiversity Targets 2010 - 2020</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Goal 1: Addressing the drivers of wetland loss and degradation</strong></td>
<td><strong>Aichi Target # 5</strong>&lt;br&gt;By 2020, the rate of loss of all natural habitats, including forests, is at least halved and where feasible brought close to zero, and degradation and fragmentation is significantly reduced.</td>
</tr>
<tr>
<td><strong>Target 1</strong>&lt;br&gt;Wetlands benefits are features in national/ local policy strategies and plans relating to key sectors such as water, energy, mining, agriculture, tourism, urban development, infrastructure, industry, forestry, aquaculture, fisheries at the national and local level</td>
<td><strong>Aichi Target # 2</strong>&lt;br&gt;By 2020, at the latest, biodiversity values have been integrated into national and local development and poverty reduction strategies and planning processes and are being incorporated into national accounting, as appropriate, and reporting systems.</td>
</tr>
<tr>
<td><strong>Target 2</strong>&lt;br&gt;Water use respects wetland ecosystem needs for them to fulfill their functions and provide services at the appropriate scale inter alia at the basin level or along a coastal zone.</td>
<td><strong>Target 3</strong>&lt;br&gt;The public and private sectors have increased their efforts to apply guidelines and good practices for the wise use of water and wetlands.</td>
</tr>
<tr>
<td><strong>Target 3</strong>&lt;br&gt;The public and private sectors have increased their efforts to apply guidelines and good practices for the wise use of water and wetlands.</td>
<td><strong>Aichi Target # 3</strong>&lt;br&gt;By 2020, at the latest, incentives, including subsidies, harmful to biodiversity are eliminated, phased out or reformed in order to minimize or avoid negative impacts, and positive incentives for the conservation and sustainable use of biodiversity are developed and applied, consistent and in harmony with the Convention and other relevant international obligations, taking into account national socio economic conditions.</td>
</tr>
<tr>
<td><strong>Target 4</strong>&lt;br&gt;Invasive alien species and pathways of introduction and expansion are identified and prioritized, priority invasive alien species are controlled or eradicated, and management responses are prepared and implemented to prevent their introduction and establishment.</td>
<td><strong>Aichi Target # 9</strong>&lt;br&gt;By 2020, invasive alien species and pathways are identified and prioritized, priority species are controlled or eradicated, and measures are in place to manage pathways to prevent their introduction and establishment.</td>
</tr>
<tr>
<td>Goal 2: Effectively conserving and managing the Ramsar Site network</td>
<td>Aichi Target # 11</td>
</tr>
<tr>
<td>---</td>
<td>---</td>
</tr>
<tr>
<td><strong>Target 5</strong></td>
<td>The ecological character of Ramsar sites is maintained or restored, through effective planning and integrated management</td>
</tr>
<tr>
<td><strong>Aichi Target # 12</strong></td>
<td>By 2020 the extinction of known threatened species has been prevented and their conservation status, particularly of those most in decline, has been improved and sustained.</td>
</tr>
<tr>
<td><strong>Aichi Target # 6</strong></td>
<td>By 2020 all fish and invertebrate stocks and aquatic plants are managed and harvested sustainably, legally and applying ecosystem based approaches, so that overfishing is avoided, recovery plans and measures are in place for all depleted species, fisheries have no significant adverse impacts on threatened species and vulnerable ecosystems and the impacts of fisheries on stocks, species and ecosystems are within safe ecological limits.</td>
</tr>
<tr>
<td><strong>Target 6</strong></td>
<td>There is a significant increase in area, numbers and ecological connectivity in the Ramsar Site network in particular underrepresented types of wetlands including in underrepresented ecoregions and transboundary sites</td>
</tr>
<tr>
<td><strong>Aichi Target # 10</strong></td>
<td>By 2015, the multiple anthropogenic pressures on coral reefs, and other vulnerable ecosystems impacted by climate change or ocean acidification are minimized, so as to maintain their integrity and functioning.</td>
</tr>
<tr>
<td><strong>Target 7</strong></td>
<td>Sites that are at risk of change of ecological character have threats addressed.</td>
</tr>
<tr>
<td><strong>Aichi Target # 5</strong></td>
<td>By 2020, the rate of loss of all natural habitats, including forests, is at least halved and where feasible brought close to zero, and degradation and fragmentation is significantly reduced.</td>
</tr>
<tr>
<td><strong>Aichi Target # 7</strong></td>
<td>same as above</td>
</tr>
<tr>
<td><strong>Aichi Target # 11</strong></td>
<td>same as above</td>
</tr>
<tr>
<td>Goal 3: Wisely using all wetlands</td>
<td></td>
</tr>
<tr>
<td>--------------------------------</td>
<td>-----------------</td>
</tr>
<tr>
<td><strong>Target 8</strong></td>
<td>National wetland inventories have been either initiated, completed or updated and disseminated and used for promoting the conservation and effective management of all wetlands.</td>
</tr>
<tr>
<td>Aichi Target # 14</td>
<td>same as above</td>
</tr>
<tr>
<td>Aichi Target # 18</td>
<td>By 2020, the traditional knowledge, innovations and practices of indigenous and local communities relevant for the conservation and sustainable use of biodiversity, and their customary use of biological resources, are respected, subject to national legislation and relevant international obligations, and fully integrated and reflected in the implementation of the Convention with the full and effective participation of indigenous and local communities, at all relevant levels.</td>
</tr>
<tr>
<td>Aichi Target # 19</td>
<td>By 2020, knowledge, the science base and technologies relating to biodiversity, its values, functioning, status and trends, and the consequences of its loss, are improved, widely shared and transferred, and applied.</td>
</tr>
<tr>
<td>Aichi Target # 12</td>
<td>same as above</td>
</tr>
<tr>
<td><strong>Target 9</strong></td>
<td>The wise use of wetlands is strengthened through integrated resource management at the appropriate scale, <em>inter alia</em>, within a river basin or along a coastal zone.</td>
</tr>
<tr>
<td>Aichi Target # 4</td>
<td>same as above</td>
</tr>
<tr>
<td>Aichi Target # 6</td>
<td>By 2020 all fish and invertebrate stocks and aquatic plants are managed and harvested sustainably, legally and applying ecosystem based approaches, so that overfishing is avoided, recovery plans and measures are in place for all depleted species, fisheries have no significant adverse impacts on threatened species and vulnerable ecosystems and the impacts of fisheries on stocks, species and ecosystems are within safe ecological limits.</td>
</tr>
<tr>
<td>Aichi Target # 7</td>
<td>same as above</td>
</tr>
<tr>
<td><strong>Target 10</strong></td>
<td>The traditional knowledge, innovations and practices of indigenous peoples and local communities relevant for the wise use of wetlands and their customary use of wetland resources, are documented, respected, subject to national legislation and relevant international obligations and fully integrated and reflected in the implementation of the Convention with a full and effective participation of indigenous and local communities at all relevant levels.</td>
</tr>
<tr>
<td>Aichi Target # 18</td>
<td>By 2020, the traditional knowledge, innovations and practices of indigenous and local communities relevant for the conservation and sustainable use of biodiversity, and their customary use of biological resources, are respected, subject to national legislation and relevant international obligations, and fully integrated and reflected in the implementation of the Convention with the full and effective participation of indigenous and local communities, at all relevant levels.</td>
</tr>
<tr>
<td><strong>Target 11</strong></td>
<td>Wetland functions, services and benefits are widely demonstrated, documented and disseminated.</td>
</tr>
</tbody>
</table>
