

13th Meeting of the Conference of the Contracting Parties to the Ramsar Convention on Wetlands

“Wetlands for a Sustainable Urban Future”
Dubai, United Arab Emirates, 21-29 October 2018

Ramsar COP13 Doc.18.26 Rev.1

Draft resolution on the enhanced conservation of coastal marine turtle habitats and the designation of key areas as Ramsar Sites

Submitted by France and Senegal

1. NOTING that six out of seven species of marine turtles (Dermochelyidae: *Dermochelys coriacea*; Cheloniidae: *Chelonia mydas*, *Caretta caretta*, *Eretmochelys imbricata*, *Lepidochelys olivacea*, *Lepidochelys kempii*, *Natator depressus*) have a conservation status ranging from vulnerable to critically endangered according to IUCN Red List criteria and ALSO NOTING that in order to live and survive these species depend on a variety of coastal habitats throughout their life cycle;
2. RECALLING that the Convention adopted several resolutions that are relevant and can benefit the conservation of habitats important for marine turtles: Resolution VII.21 on *Enhancing the conservation and wise use of intertidal wetlands*, Resolution VIII.4 on *Wetland issues in Integrated Coastal Zone Management (ICZM)*, and Resolution VIII.32 on *Conservation, integrated management, and sustainable use of mangrove ecosystems and their resources*.
3. CONSIDERING that habitats that are home to endangered marine turtle species meet Criterion 2 of the Convention for inclusion in the List of Ramsar Sites, and that consequently, the Ramsar Convention can play a role by encouraging Parties to strengthen their management and conservation actions related to the wetland habitats that are essential to these species;
4. ALSO CONSIDERING that marine turtles are included in Appendix I of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES), Appendices I and II of the Convention on the Conservation of Migratory Species of Wild Animals (CMS), and are addressed in regional instruments and international organizations, such as the Berne Convention on the Conservation of European Wildlife and Natural Habitats, Abidjan Convention, the Inter-American Convention for the Protection and Conservation of Sea Turtles (IAC), the Cartagena Convention for the Protection and Development of the Marine Environment in the Wider Caribbean Region, the Barcelona Convention for the Protection of the Mediterranean Sea against Pollution, the CMS Memorandum of Understanding on the Conservation and Management of Marine Turtles and their Habitats of the Indian Ocean and South-East Asia (IOSEA Marine Turtles MoU), and the CMS Memorandum of Understanding concerning Conservation Measures for Marine Turtles of the Atlantic Coast of Africa (African Atlantic Turtles MOU), the Secretariat of the Pacific Regional Environment Programme (SPREP), and the Permanent Commission for the South Pacific (CPPS), under which their members have committed to enhance protection for marine turtles;

5. NOTING the existence of additional action plans such as, for example, the Pacific Islands Regional Marine Species Conservation Action Plan, and the Single Species Action Plan for the loggerhead turtle *Caretta caretta* in the South Pacific Ocean, adopted by the Conference of the Parties to the CMS in Quito in November 2014 and the development of the Single Species Action Plan for the conservation of the Hawksbill Turtle (CMS COP12 Decision 12.17);
6. NOTING that some marine turtle subpopulations, such as Northwest Atlantic loggerheads, have increased due to significant conservation efforts, including prohibiting or modifying fishing practices, designating protected areas and addressing light pollution;
7. CONCERNED by the fact that several regional populations of marine turtles are facing a high risk of extinction, and NOTING the degradation of their coastal habitats, the significant impact from fisheries bycatch and also NOTING the excessively high mortality rates due to egg collection, killing or poaching of adult females on the nesting beaches and the impact of native or introduced predators, as well as natural mortality of eggs and hatchlings;
8. CONSIDERING that marine and coastal feeding and nursery areas, that are used by marine turtles during their life cycle such as, *inter alia*, estuaries, seagrass beds, coral reefs and mangroves, are often threatened physically and chemically by human activities such as urban, industrial, port, and tourism development and infrastructures as well as wastewater discharges, agricultural runoff and industrial effluents;
9. RECOGNIZING the potential and expected role of indigenous peoples and local communities including women and other vulnerable groups in marine turtle conservation and management;
10. CONSIDERING that the protection of nesting beaches, marine and coastal feeding, nurseries and growth areas will improve the survival rate of adult female, hatchlings and immature turtles and that their designation as Ramsar Sites could be a first step towards an enhanced protection;
11. NOTING that CMS Resolution 12.25 on *Promoting Conservation of Critical Intertidal and Other Coastal Habitats for Migratory Species* adopted by the Twelfth Session of the Conference of the Parties to the Convention on the Conservation of Migratory Species of Wild Animals (CMS) (Manila, October 2017) urges the CMS Parties to conserve intertidal and coastal habitats for migratory species;
12. FURTHER NOTING that CMS Resolution 12.23 on Sustainable Tourism and Migratory Species outlines general principles for ensuring that tourism activities benefit from and do not harm migratory species, including involvement of and benefits to local communities;
13. NOTING that 240 Ramsar Sites and 73 Contracting Parties already provide habitat for at least one species of marine turtle (see the annexed table);
14. RECOGNIZING that the CMS African Atlantic Turtles Memorandum of Understanding (MoU) and CMS IOSEA Marine Turtles MoU adopted resolutions the application of which can help improve the conservation of marine turtles; and
15. RECALLING that an MoU has been signed between the IAC Secretariat and the Secretariat of the Ramsar Convention and that its goal is to join the efforts made in the frameworks of the Ramsar Convention and IAC, with the aim of building capacities for the Parties of both Conventions to identify and strengthen the conservation and rational use of Ramsar Sites,

THE CONFERENCE OF THE CONTRACTING PARTIES

16. ENCOURAGES the Contracting Parties whose coastlines contain marine turtle breeding areas, nesting beaches, coastal migration corridors, feeding and nurseries areas, to identify index nesting and foraging sites and ensure the populations are monitored as precisely as possible, in order to improve our knowledge of the distribution, numbers and state of health of each of the species involved;
17. ENCOURAGES the Contracting Parties to strengthen the conservation and management of those identified index nesting and foraging sites, and notably, if possible, to designate them as Ramsar Sites, based on Criterion 2, and to strengthen this designation through the promulgation of the appropriate protective measures in accordance with their legislation and the availability of resources, in particular through the creation of marine protected areas, as appropriate;
18. ENCOURAGES the Contracting Parties to develop and implement management plans for these sites, by integrating specific means for the conservation, protection or restoration of coastal habitats for the different marine turtle species and integrate these site management plans with coastal zone management plans;
19. ENCOURAGES the Contracting Parties to consult each other, and work through existing regional agreements, MoUs and action plans, such as those mentioned in paragraph 4 above, to protect habitats in networks allowing for greater safety for marine turtles during their life cycle and in their movements;
20. STRESSES the urgent need to take, whenever possible, the measures required to reduce threats to nesting areas, such as noise and light pollution, beach erosion and to control native predators and eradicate introduced predators at these sites, and to develop best practices to guide the interaction of humans and marine turtles on raising the awareness of inhabitants of and visitors to coastal zones, leveraging the prestigious Ramsar brand and the communication, capacity building, education, participation and awareness (CEPA) programme;
21. ENCOURAGES Contracting Parties with marine turtle habitats to promote the wise use of these wetlands by working with local communities, stakeholders, and relevant institutions to raise awareness of the importance of conserving marine turtles, their nests and their habitats, and to halt poaching and exploitation of marine turtle by-products including through, *inter alia*, fostering alternative sustainable livelihoods, including sustainable eco-tourism;
22. ENCOURAGES Contracting Parties to review their Ramsar Site management plans to seek to ensure they include marine turtle conservation actions, as appropriate, and RECOMMENDS enhancing synergies and better coordination with Regional Initiatives and existing networks rather than the establishment of new arrangements;
23. URGES Contracting Parties to undertake collaborative research on impacts of climate change on marine turtles and their wetlands habitats, and REQUESTS the Scientific and Technical Review Panel (STRP), consistent with its scope, mandate and priority thematic work areas for 2019-2021, in developing its proposed work plan for presentation at the 57th Meeting of the Standing Committee, to consider developing rapid assessment methods to assess climate vulnerability of wetlands, particularly those important as habitats for marine turtles; and
24. REQUESTS the Secretariat to work with the Secretariats of the IAC and the CMS as well as their MoUs (including the IOSEA Marine Turtles MoU and the African Atlantic Turtles MoU) to

enhance marine turtle conservation in Ramsar Sites and ALSO REQUESTS that, where possible, and subject to the availability of resources, these Secretariats work with Contracting Parties to include marine turtle conservation actions in their Ramsar Site management plans.

Annex 1

Existing Ramsar Sites with coastal and marine turtle habitats

List established on October 2018 by Jacques Fretey and Patrick Triplet

Sources :

Ramsar Sites information service : <https://rsis.ramsar.org/>

Information on Ramsar sites with presence of sea turtles for the western hemisphere included in this list, can also be found in the report prepared by IAC and Ramsar Secretariat entitled "Wetlands of international importance and sea turtle conservation". The link for the report is:

<http://www.iacseaturtle.org/eng-docs/publicaciones/humedales-tortugas-marinas-ing-peq.pdf>

Species involved (nesting beaches, nursery areas, feeding areas)*:

Lepidochelys olivacea = Lo (IUCN Red List status: Vulnerable)

Lepidochelys kempii = Lk (IUCN Red List status: Critically Endangered)

Chelonia mydas = Cm (IUCN Red List status: Endangered)

Chelonia agassizii or *C. mydas agassizii* = Ca (IUCN Red List status: Endangered)

Caretta caretta = Cc (IUCN Red List status: Endangered)

Eretmochelys imbricata = Ei (IUCN Red List status: Critically Endangered)

Dermochelys coriacea = Dc (IUCN Red List status: Vulnerable)

Natator depressus = Nd (IUCN Red List status: Data Deficient)

*Note: Depending on the description of the site, there may be errors in the identification of species or lack of knowledge about existing habitats
